

Houses, Structures, Heavy Equipment  
Moved And Raised

Three Generations Of Experience

# Why Choose Trost?

Through years of experience in construction, heavy equipment, building and home moving, Trost has a unique understanding of a wide range of heavy moving projects.

Jacking and heavy moving is what Matt Trost grew up doing. But the Trost family business has diversified to become experts in the fields of Heavy Equipment and Building moving, Marine Development and General Engineering.

In an ever-changing business environment, the need for a company that can adapt to new construction techniques, building codes, and safe workplace requirements, Trost Jacking and Heavy Moving, Inc, has been able to finish any job put in front of them with a perfect OSHA record.

Trost has consulted as an expert on numerous projects as well as personally tackling moving components ranging from 100 ton magnets for Lawrence Livermore Labs, to 3000 ton bridge sections over the Russian River in Healdsburg for Caltrans.

## Service Points of Interest.

1. Matt Trost is personally responsible for each project and sees it through from start to finish.
2. Very competitive pricing.
3. Customer service is important to us. You speak directly to the Trost family.
4. We carry all of the required general liability and workers compensation insurance.
5. Trost Jacking and Heavy Moving has been successfully completing projects for more than 60 years.

New markets for Trost are appearing all the time. Demand for earthquake retrofit work and the preservation of historic structures has been a driving force for work in the past. Trost Jacking and Heavy Moving, Inc. looks forward to more work related to public works projects.

Bidding work on dam projects, FEMA projects, and city infrastructure improvements will help to keep our company around for many years to come.

# What We Do

Trost Jacking and Heavy Moving, Inc. has many years of experience in a wide range of moving, jacking, lifting and relocation projects. Some of our main areas of expertise are:

## **House/Building/Machinery/Plant Moves:**

There are numerous reasons why people move their homes; from aesthetic to affordability, house moving has been done by our family since the 1940's. Many historic buildings are rescued from demolition by Trost. Buildings that seem too heavy or too big are no problem for us. Many of our customers say that if you tell Trost "it can't be done" they will find a way to move it.

## **House Raise:**

From one to three stories, many jacking procedures can be accomplished in one or two days. The need for new foundations, seismic upgrades or the affordability of taking what is existing, saving it and starting new building underneath it makes an efficient solution essential. Working on houses up in the air can also be a bit precarious. Trost incorporates many construction techniques to insure stability, efficiency and cost-effectiveness.

## **Shoring/Tight Access Shoring:**

The ability to hold and place everything while work takes place has been an ongoing problem with regard to clients desiring more access to living/working space and the constraints of confined workspaces. Trost has shored roofs, walls and floors with varying loads and materials. Our broad range of equipment will efficiently shore your job at a reasonable price.

## **Leveling:**

Leveling work is a big part of remodeling of old houses. Trost's ability to accurately monitor house jacking to within (+/-) 1/4 of an inch will allow a settled house to feel like a new one.

## **Large Vessel Moves/Launches:**

Whether in a big ship yard or a boat builders dream in his back yard. Trost has moved boats of all different shapes and sizes. Different types of boats bring new and complex problems; from fixing 400 ton barges that have broken in half because of too much load, to historic irreplaceable turn-of-the-century vessels that have been re-launched by Trost after full restoration, to launching service boats such as new fishing boats weighing as much as 150 tons, Trost has done it all.

## **Heavy Equipment Move Onsite:**

Typically an industrial application involving tanks, machinery or construction equipment which can be positioned exactly where the client needs them to be. Trost has moved almost anything you can think of from cargo cranes and trains to aircraft and gigantic, 1100 ton diesel engines.
